

Storage & distribution

In storage and distribution systems the objective is to maintain the chemical and microbiological quality of the PW/HPW at constant high level to ensure that user points are supplied with the quality exceeding the requirements defined per USP/EP at any time and providing sufficient safety margin to set alarm and action levels.

LOOPO CSpace saving, compact system for the storage, distribution, sanitisation, controlling and quality monitoring of Purified Water and Highly Purified Water with continuous ozonization of the storage tank.

LOOPO HSpace saving, compact system for the hot-water storage, distribution, sanitisation, controlling and quality monitoring of WFI.
